

ÅF-Ingemansson

The Pulp and Paper Industry

The pulp and paper industry was a forerunner when beginning to take an interest in workplace noise control already in the middle of the 1960's. ÅF was involved from the start and we are still the leading consultants in this industry - world-wide.

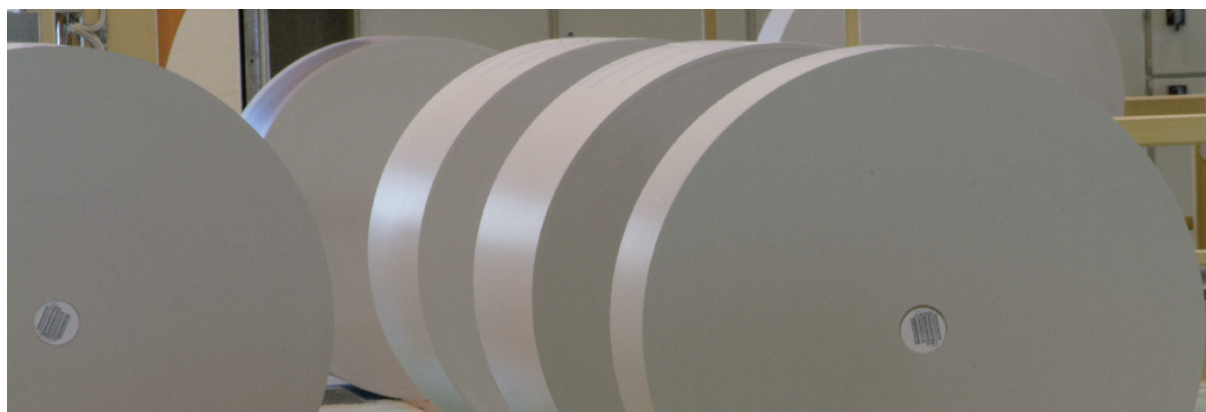

The branch has gone through a tremendous development of rising production capacity. Larger units, faster and more efficient machinery and less personnel are the key words. Noise is still an important problem although there are many examples of extremely good noise control results due to systematic and detailed acoustical design work.

ÅF-Ingemansson offers advanced technology, modern instrumentation, up-to-date calculation facilities used by our experienced staff.

Nothing beats experience

We can support the pulp and paper industry to be "a good citizen" in the 21'st century. Vast experiences in workplace noise control as well as external noise reduction to the community is a guarantee of good solutions.

ÅFs part working with sound and vibrations is accredited as a testing laboratory in accordance with EN 45001 and have a certified quality system – ISO 9001.
